Summary

Final-year B.E. Computer Science student at SSN College of Engineering with production internship experience shipping features across an enterprise HRMS platform, and projects spanning real-time systems, role-based access control, and REST APIs. Looking for full-time Software Engineering roles starting 2027.

Skills

Languages: C, C++, Java, JavaScript

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, NestJS, Java Servlets, GraphQL, REST APIs

Databases: MongoDB, PostgreSQL, MySQL, Redis, Prisma ORM

Real-Time: Socket.IO, WebSockets, WebRTC

Tools: Git, GitHub, Postman, Vercel, Render, VS Code

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

Software Engineering Intern

May 2026 – June 2026

AerixNova Technologies

React, Tailwind CSS, NestJS, GraphQL, Prisma, Redis

- Worked across 8+ sections of a production HRMS platform (employee, payroll, attendance, leave, loans, bank statements, shift management, and performance & incentives) used by real clients.
- Built features from scratch including a Leave Request Management Portal with role-based dynamic views, a WhatsApp payslip delivery system with recipient selection, holiday sync for public holidays, and a Performance & Incentives module.
- Resolved critical data consistency bugs including attendance-leave mapping, week-off status sync across shift and attendance registers, leave balance allocation, and employee uniqueness validation in production data.

Projects

Vertex Connect — Real-Time Chat App

Live Demo

React.js, Node.js, Express.js, MongoDB, Socket.IO, WebRTC, Redis, JWT, Cloudinary, Gemini AI

- Built a real-time chat app with group chats, typing indicators, online/offline status, and read/delivery status that stays in sync across multiple tabs.
- Built the messaging system using a publish/subscribe pattern so it can run on multiple servers; secured private rooms with token-based login and passcode-protected chat locks.
- Added one-to-one voice and video calling using TURN/ICE servers so calls work behind firewalls and on mobile networks.
- Added an in-app AI assistant with streaming responses, and a file-hash check that skips re-uploading files that already exist.

QuickBite — Online Canteen Management System

Live Demo

React.js, Java Servlets, JDBC, PostgreSQL, REST APIs

- Built a food ordering platform for three roles (student, shop admin, main admin) with order tracking, menu management, and an analytics dashboard.
- Used JDBC transactions and PostgreSQL row-level locking to stop duplicate order numbers when many people order at the same time.
- Built 20+ REST API endpoints with session-based login, role-based access control, and protection against SQL injection using PreparedStatements.

Smart File Search Engine

Demo Video

C++, Node.js, Express.js, React.js

- Built a file search tool with three parts: a C++ search engine, a Node.js REST API, and a React UI with dark/light mode and one-click file opening.
- Built an in-memory index for fast keyword lookup, with relevance-based ranking and multi-word search with file-type filters.
- Connected the C++ program to the web app using Node.js, and made searches faster by skipping folders like `node_modules` and `.git`.

Education

Sri Sivasubramaniya Nadar College of Engineering, Chennai

2023 – Present

B.E. Computer Science and Engineering

CGPA: 6.93 / 10

Green Park Matriculation Higher Secondary School, Namakkal

2022 – 2023
